

ATTACHMENT A

Voluntary Product Stewardship Programs

- o In late 1995, ARCO agreed to conduct voluntary comprehensive health effects testing on ethyl *t*-butyl ether (ETBE), a new "Oxygenated Fuel Additive."
- o The voluntary testing program currently includes the following types of studies:
 - pharmacokinetics
 - genotoxicity
 - subchronic toxicity
 - neurotoxicity
 - developmental/reproductive toxicity (to be added later)
- o ETBE was added to EPA's Master Testing List (MTL) as a member of the category of "Oxygenated Fuel Additives" to obtain test data to support ongoing activities in EPA's Office of Air and Radiation (OAR/EPA).
