

Note concerning Dasibi designated reference and equivalent method analyzers:

May 23, 2002

As you may know, Dasibi Environmental Corporation of Glendale, California has changed ownership, and the factory has been closed since the end of February, with most or all of the employees laid off. There is some hope that the factory might eventually reopen, but little information to indicate when (or even whether) that might happen.

We are aware of three companies, listed below, that may be able to provide some service, repair parts, or supplies for Dasibi analyzers. We are working with these companies to try to verify that the parts and supplies they offer are equivalent to the corresponding Dasibi parts and supplies so that they can be approved for use in Dasibi analyzers under their reference or equivalent method designations. Additional information in that regard will be posted here as it becomes available. If you know of other potential suppliers of service, parts, or supplies for Dasibi analyzers, please share that information on the AMTIC public forum for the benefit of other Dasibi analyzer operators.

Environics, Inc.
69 Industrial Park Rd. E.
Tolland, CT 06084-2805
203-429-0077
