

Errata

Small Entity Compliance Guide

National Volatile Organic Compound Emission Standards

for Architectural Coatings

EPA-453/R-99-003

A copy of this errata is available on the U.S. Environmental Protection Agency Technology Transfer Web site at <http://www.epa.gov/ttn/atw/183e/aim/aimpg.html>. Check the website periodically to see if further corrections have been added to this errata.

1. Page 51. In the text box, change "To convert English tons to megagrams, multiply by 1.102" to "To convert English tons to megagrams, divide by 1.102."
2. Page B-38. Change the definition of Varnish from "A clear wood coating formulated and recommended for application to bare wood to seal the wood and to provide a coat that can be sanded to create a smooth surface. A sanding sealer that also meets the definition of a lacquer is not included in this category, but is included in the lacquer category," to read: "Varnish means a clear or semitransparent coating, excluding lacquers and shellacs, formulated and recommended to provide a durable, solid, protective film. Varnishes may contain small amounts of pigment to color a surface, or to control the final sheen or gloss of the finish."
